# **Ease Your Frustration When On The Golf Course**

With the game of golf becoming increasingly popular many different kinds of equipment are available on the market designed to help the golfer improve his or her game. Most golfers will agree that there are times when the game can be extremely frustrating and this is even more so when you are what is referred to as a weekend golfer. Players who only get to the course on the weekends do not have much time on their hands in order to practice their game. Even when a golfer finds a shot that is like the one before it they will find that they will do well one time and miss the shot the next time. All golfers experience this because even a small difference affects the end result.

This is one reason why GPS devices, such as the [Sky Caddie SG3.5V GPS](#) Unit, have gained in popularity in recent years, as they allow you to take much of the guesswork out of your game. These devices give you the chance to see your next shot before it happens, as they come with a layout of many different golf courses. You will have access to hazards, changes in elevation, and even the contours of the green, which could help you to improve your game considerably. Much of golf is about muscle memory and if you are able to remember exactly how to hit a 150 yard shot, you will begin making that shot with more regularity. A GPS device will let you know when you are 150 yards out, so you will know which shot to take.

Devices like the [Sky Caddie SG3.5V GPS](#) Unit can help a great deal with club selection, so they act in a similar fashion to a caddy. That is not to say that they can carry your bags for you, but they do provide the same type of information in a handheld device. They are becoming more popular on golf courses every year, as they are meant to provide an advantage for the players who use them. Keep in mind, however, that these devices will not single-handedly improve your golf game, as you still must be able to convert your shots once you have this information.

A titanium driver is another item that can significantly help you to improve your overall game. This driver will enable the player to achieve the maximum distance and naturally this helps to improve their golf score. Although some golfers find that this device can hinder their accuracy, with practice they will find that it is beneficial to their game. Combined with the Sky Caddie SG3.5V GPS Unit the player's handicap will be reduced noticeably. For any golfer who wants to improve their game and thereby also their experience on the course, adding these items to their bag will be a decision they won't regret.
