# **Gear For Your Scotland Golf Tour: Ping G10 Driver Summary**

I have been golfing in every part of the world, however, time and again I find myself rebooking a Scotland golf tour. Standing on a barren tee which overlooks the sea is a brisk experience that brings out the best in any golfer. If you are contemplating increasing your game, think about your clubs first and foremost. Upgrading a club or two might make a huge difference in your score. Below is my opinion of a fantastic club from Ping, the G10 driver.

Golf has wicker itself in the social fabric as the game of the best and high-end businessmen. It was a game of communal status. Nevertheless, the massive popularity of the game can be judged by the very fact that there are over 32,000 golf courses in the world! Time has changed the circumstances, as we are walking towards modernisation, golf is also heading towards common men.

Scotland is where GOLF was born. Apart from having the historical account of almost half-a-century the city is a growing hub of modernization and an upcoming destination for development. And golf is the key reason to visit Scotland year after year. With the popularity of golfing holidays continuing to rise, Scotland is likely to see an ongoing demand for Scotland golf tour that include golf activities, tourist activities like visiting castles and taverns and generally seeing the sites of the region. Scotland golf tour packages provide you with golfing and touring. Scotland golf tour gives you an unusual golf excursions combining luxury, exotic or unexpected locales, and adventure.

[Scotland Golf Tour](#) - Unique Design of Ping G10 Driver

This is the latest most current offering in the famous G series. The G10 has quite a few significant upgrades which have been developed with the assistance of a Cray supercomputer, the quickest in the whole world. As stated by Wikipedia:

Supercomputers are implemented for very calculation-intensive projects like problems related to quantum physics, weather forecasting, climate research, molecular modelling (gauging the structures as well as properties of chemical compounds, biological macromolecules, polymers, and crystals), physical replications (like replicas of airplanes inside wind tunnels, simulation of the setting off of nuclear weapons, and research into nuclear fusion).

Nuclear arms and quantum physics? For sure, the Cray must have done a great job on a not-so-lowly Ping driver! However, I digress...here's more.

[Scotland Golf Tour](#) - More Details on the Ping G10 Driver

Having optimised crown, sole and face interaction this special driver offers unparalleled energy to the ball. If you elect to buy the model with interior weight, it is going to lower the club's centre of gravity, which in turn lessens spin and improves distance. The club's patented variable face thickness is a remarkably receptive impact surface that produces superior ball speed and stunning constancy across the entire face. Not pleased with just cutting-edge technical make-up, the engineers at Ping also tested and advanced the club with the aid of a group of advanced golfers. The result? Most favourable energy transfer which faultlessly converts the golfer's physical strength into driving distance.

[Scotland Golf Tour](#) - Last Thoughts about the Ping G10

I consider myself to be a middle level golfer and this particular driver truly helps toward increasing my game. The bigger head size, especially, extends to me remarkable results off the tee and after the ball bounces. In tests, this club drove more than 250 yards off the tee. Astonishing! Coalesce with that the G10's excellent forgiveness and flexibility and you will definitely be reaching for it regularly.

To make the most of your Scotland golf tour, be certain to get a Ping G10 driver.

The Ping G10 will surely optimise your game during your Scotland golf tour. If you want to book a tour, please visit <http://www.golfaroundscotland.com>.
